Appendix C: Drainage Report

I. Project Introduction

This Preliminary Engineering Report provides an initial analysis of the feasibility, cost-effectiveness and necessity of the proposed infrastructure improvements. The proposed improvements include the installation of new storm sewer, sanitary sewer, watermain, sidewalks, and streets.

This project includes the following:

- Reconstruction of 1st, 2nd, and 3rd Streets between Boulevard Avenue and Hickory Avenue.
- Reconstruction of Mill Avenue from 1st Street to 4th Street and mill and overlay from 4th Street to 5th Street.
- Reconstruction of Linden Avenue from 1st Street to 5th Street.
- Mill and overlay of 4th Street from Boulevard Avenue to Hickory Avenue.

The objectives of the proposed improvements are to replace and improve the water supply system, storm sewer, sanitary collection system, establish sidewalk continuity and ADA Compliance, and provide an improved driving surface.

Figure 1 (*Appendix A*) illustrates the proposed project location.

II. Existing Conditions

A. Streets

Surface conditions vary throughout the project which were taken into consideration for the proposed improvements. In areas of reconstruction, the pavements are in very poor condition with many forms of cracking, potholes, raveling and heaves. All these point to a road base that has deteriorated, and that the roadway has reached the end of its service life. 1st Street largely consists of a gravel roadway with many potholes. While a portion of the streets have significant elevation change, there are several blocks that have minimal change and a lack of storm sewer leading to many instances of standing water from rain events and groundwater discharging from sump pump lines.

Surface conditions for the proposed mill and overlay areas are in better condition but still in need of a treatment to extend the life of the roadway. Some curb and gutter are in poor condition or have settled, causing standing water to accumulate.

B. Sidewalk

Sidewalk abundantly exists throughout the project on various sides of the streets. While existing sidewalk is continuous for some streets, other areas have random points of termination or switch from one side of the street to the other without a clear pathway. The condition of the sidewalk also varies throughout the project area and primarily ranges from poor to okay. Sidewalk widths also vary, and tripping hazards and other discontinuities exist within the sidewalk. ADA compliance is not consistent within the project area.

C. Sanitary Sewer

The existing sanitary sewer primarily consists of 8-inch vitrified clay pipe (VCP) and some polyvinyl chloride (PVC). Televising videos and reports (Pipe Services, Inc. dated March 2022) were reviewed within the project area to determine the condition of the existing pipes; digital and paper copies of these reports were provided to the City. Significant cracks were found to be common in the joints, walls, and service lateral connections; root intrusions and deposit accumulations were also observed.

The deficiencies observed in the sanitary sewer system will lead to problems such as infiltration and inundation (I&I) which requires excess water treatment and can lead to sewer backups into buildings. The existing sanitary main has reached the end of its useful life and should be replaced.

The current sanitary mainline layout is illustrated in **Figures 2A to 2F** (Appendix A).

D. Watermain

The existing watermain throughout the proposed reconstruction areas is 6-inch cast iron pipe (CIP) that is assumed to be over 50-years old. The segment along 4th Street consists of 12-inch PVC that was installed within the last 20-years. Cast iron pipe can be brittle and is susceptible to increased risk of rupturing and is undersized for fire flows and general usage and should be upsized to 8-inch to improve service and replace the aging facility.

The existing watermain is inadequate and has reached the end of its useful life and should be upsized within the project reconstruction areas to a City standard of 8-inch diameter watermain to enhance the water flow, fire protection, and to upkeep the City's infrastructure.

The existing watermain layout is illustrated in **Figures 2A to 2F** (Appendix A).

E. Storm Sewer

A separate **Drainage Report** was prepared in conjunction of this report to greatly expand on the drainage conditions and storm sewer within the project and surrounding areas. This is included as **Appendix C**. A summary of the existing storm sewer would describe the facilities as undersized and non-existent in certain areas of the project that would benefit from increased inlets. Much of the storm sewer is also in poor or underperforming condition, as observed, in the storm sewer televising.

The existing storm sewer layout is illustrated in **Figures 2A to 2F** (Appendix A).

III. Proposed Improvements

A. Street Improvements

As mentioned in the *Project Introduction*, the project consists of different surface improvements. The list below further expands on the improvements:

1st Street – Reconstruction

From Boulevard Avenue to Mill Avenue a 24-foot wide street with concrete curb and gutter on either side with no sidewalk.

From Mill Avenue to the northern terminus an 18-foot wide street with bituminous curb and gutter on either side with no sidewalk. Bituminous curb and gutter, as opposed to concrete, is proposed as a cost saving measure while still providing drainage control.

2nd & 3rd Streets – Reconstruction

A 36-foot wide street with concrete curb and gutter on either side is proposed. Sidewalk is proposed on the west side of each street between Boulevard and Mill Avenue and then on the east side from Mill Avenue to Hickory Avenue.

Mill Avenue – Reconstruction and Mill & Overlay

From 1st Street to 4th Street, Mill Avenue is proposed to be reconstructed as a 32-foot wide street with concrete curb and gutter on either side. No sidewalk is proposed between 1st and 2nd Street but is proposed on the north side of the street between 2nd and 4th Street.

The road surface is proposed to be milled and overlaid between 4th Street and 5th Street. Spot repairs are proposed for curb and gutter and a section of missing sidewalk is proposed to be constructed to 5th Street on the north side of the street.

Linden Avenue – Reconstruction

Linden Avenue is proposed to be reconstructed as a 32-foot wide street with concrete curb and gutter on either side from 1st Street to 5th Street. No sidewalk is proposed on Linden Avenue.

4th Street – Mill & Overlay

Having been reconstructed in the last 20-years, 4th Street is in generally better condition than the surrounding streets. However, the surface conditions have shown signs of aging and a surface treatment is needed for proper maintenance. An edge mill, accompanied by a fresh bituminous wear course paving and spot curb and gutter repairs is proposed as an appropriate measure.

The proposed typical sections of the reconstructed streets are illustrated in **Figures 3A and 3B**.

Roadway Section

A total of 3.5-inches of bituminous pavement placed in two lifts is proposed above 8-inches of Class 5 aggregate base and 8-inches of crushed 1-1/2" rock. Both types of base material provide structural support for the pavement and the 1-1/2" rock will also act as a drainage layer to promote subgrade drainage. Biaxial geogrid is proposed to be installed in appropriate areas, determined during construction, to provide additional strength to the roadway. Perforated edge drains (underdrain) beneath the curb and gutter (B618 high-back) bedded with coarse aggregate backfill will provide a conveyance system for groundwater to be routed to the proposed storm sewer system. Sump pump lines will be provided access connections to the underdrain for each adjacent parcel. Direct sump line connections will be made during construction as deemed feasible.

All existing driveways will be reconstructed to match the new street surface. The existing driveways will be replaced with concrete up to the back of the proposed sidewalk or a minimum of a 5-foot concrete apron on the non-sidewalk street side. Any additional driveway removal required past the sidewalk or 5-foot apron will be replaced with the existing surfacing type (i.e. bituminous with bituminous, concrete with concrete). Disturbed turf areas will also be restored with this project.

The layout of the proposed surface improvements is illustrated on **Figures 4A to 4F (Appendix A)**.

B. Sanitary Sewer Improvements

Replacement of the existing sanitary sewer is proposed for all reconstruction areas of the project. The sanitary sewer improvements are proposed to include the installation of 8-inch diameter PVC gravity flow sewer main. Lateral sanitary service lines will be constructed using 4-inch PVC pipe and will extend from the new main approximately to the property line of each parcel serviced on the main. New precast concrete manholes would replace the existing sanitary manholes where necessary.

Figures 4A to 4F (Appendix A) illustrate the layout of the proposed sanitary sewer main and manholes.

C. Watermain Improvements

Like the sanitary sewer, the watermain is proposed to be replaced for all reconstruction areas of the project. The watermain improvements within the project area will include the construction of 8-inch diameter PVC watermain. One-inch water services and shutoffs are to be installed approximately to the property line of each parcel. Hydrants and mainline shutoff valves will also be constructed as part of this project. Increased user pressures and fire flows are expected with this improvement.

Figures 4A to 4F (*Appendix A*) shows the layout of the proposed watermain, hydrants, and valves.

D. Storm Sewer Improvements

As previously mentioned, a separate **Drainage Report** (*Appendix C*) was prepared in conjunction with this report and should be reviewed for additional storm sewer information.

Generally proposed storm sewer improvements include:

- Continuation of a new 42-inch storm sewer mainline down 1st Street that was last extended to the intersection of Hickory Avenue & 1st Street as part of the 2021 Street & Utility Improvements project.
- Replacement of existing storm sewer and routing to the new 1st Street storm sewer main.
- Increasing the reach of the storm sewer system throughout the neighborhood and appropriately sizing for a 5-year rainfall event.
- Construction of a detention pond on City property adjacent to the Union Pacific Railroad (UPRR) to mitigate downstream flooding in Lexington Avenue. The pond will discharge, by pipe, across UPRR right-of-way and connect to existing storm sewer on the north side of Lexington Avenue.

The bulk of the proposed storm sewer consists of 12- to 24-inch storm sewer along with the 42-inch mainline in 1st Street.

Figures 4A to 4F (*Appendix A*) show the proposed storm sewer improvements and the **Drainage Report** (*Appendix C*) further summarizes the findings of the preliminary study.

IV. Required Permits

Upon review of the proposed improvements it was determined that the following permits will be required for the project:

- Minnesota Department of Health (MDH) for the proposed watermain.
- Potential Le Sueur County Permit for instances of work that occur in Boulevard Avenue (CSAH 26).
- Union Pacific Railroad Permit for the proposed storm sewer crossing from the pond to existing storm sewer.
- National Pollutant Discharge Elimination System (NPDES) for construction stormwater.

V. Estimated Costs

Appendix B contains the estimated costs for individual items and portions of the project. The actual cost of the project will be determined by the public bidding process and a review of all project related costs. Individual prices for work items are estimated based on similar projects previously done and have the potential to change. A 5% contingency has been included to account for work not included in the cost estimate and for discrepancies on actual unit prices. Estimated engineering costs have been included to each project category.

Estimated Costs	
Improvement Category	Estimated Cost
Surface	\$3,034,969.64
Sanitary Sewer	\$576,627.46
Watermain	\$766,330.34
Storm Sewer	\$1,065,535.31
Mill & Overlay	\$136,432.26
Total Estimated Project Cost:	\$5,579,895.00

Exhibit 1 contains the Preliminary Engineer's Estimate for the project.

VI. Assessments

The City's assessment policy was utilized in determining assessable costs for specific properties based on project benefits. Assessment rates for property and benefit type were referenced from the 2021 Street & Utility Improvements Project and are proposed to be adjusted by 10% increase due to two years of inflation, with the previous year experiencing aggressive inflation.

Applicable assessment rates for project improvements for 2023 are recommended to be:

Street

- \$7,730.58 per unit of residential full street reconstruction
- \$123.68 per front-foot of industrial full street reconstruction
- \$1,783.98 per unit of residential mill and overlay

Water and Sewer

- \$1,427.18 per unit of residential water service
- \$1,189.32 per unit of residential sanitary sewer service

This method of assessment is consistent throughout the project and treats all similar adjacent properties the same based on the benefit.

Detailed Assessment Figures (**Figures 5A to 5B**) (*Appendix A*) were prepared as a visual to supplement the Preliminary Assessment Roll (**Exhibit 2**) (*Appendix B*).

The remaining project costs shall be paid by enterprise funds and utility fees, general debt servicing, and the public.

Figures 9 and 10 (*Appendix A*) illustrate the property owners within the project limits.

Exhibits 3 & 4 (*Appendix B*) are the Preliminary Assessment Rolls for the two project locations.

VII. Project Schedule

This schedule is based on starting construction in the spring of 2023. The following is the proposed schedule for this project:

1. Collect information from Previous Engineering Firm March-April 2022
2. Send Informational Mailer to Affected Property Owners 6-15-22
3. Present Preliminary Engineering Report to City Council 6-20-22
 - City Council to Call for Improvement Hearing
4. Advertise and Mail Notices for Improvement Hearing..... Twice in Newspaper
5. Hold Improvement Hearing 7-18-22 (or Special Meeting Date)
 - City Council Ordered Improvement and Authorizes Preparation of Plans & Specifications
6. Hold Open House Meeting (4-6 pm)..... September 2022 (4-6 pm)
7. Predesign Meeting – BMI Office October 2022 (10 am)
8. City Council Approves Plans & Specifications and Authorizes Advertise for Bids 1-16-23
9. Advertise in Newspaper..... Three Weeks – Jan/Feb 2023
10. Upload plans/specifications to QuestCDN..... 1-25-23
11. Open Bids (11:00 am) 2-16-23
12. City Council – Order Advertisement of Assessment Hearing 2-20-23
13. Advertise Assessment Hearing in Newspaper Two Weeks Mar 2023
14. Mail Assessment Hearing Notice to Affected Property Owners..... 3-01-23
15. Hold Assessment Hearing 3-20-23
 - City Council Approves the Final Assessment Roll
 - City Council Accepts the Low Bid and Awards the Contract
16. Hold Open House Meeting (w/ Contractor) (4-6pm) TBD (Spring 2023)
17. Begin Construction Start April/May, 2023
18. Substantial Completion..... 11-01-23
19. Final Completion..... 6-01-24

VIII. Recommendations

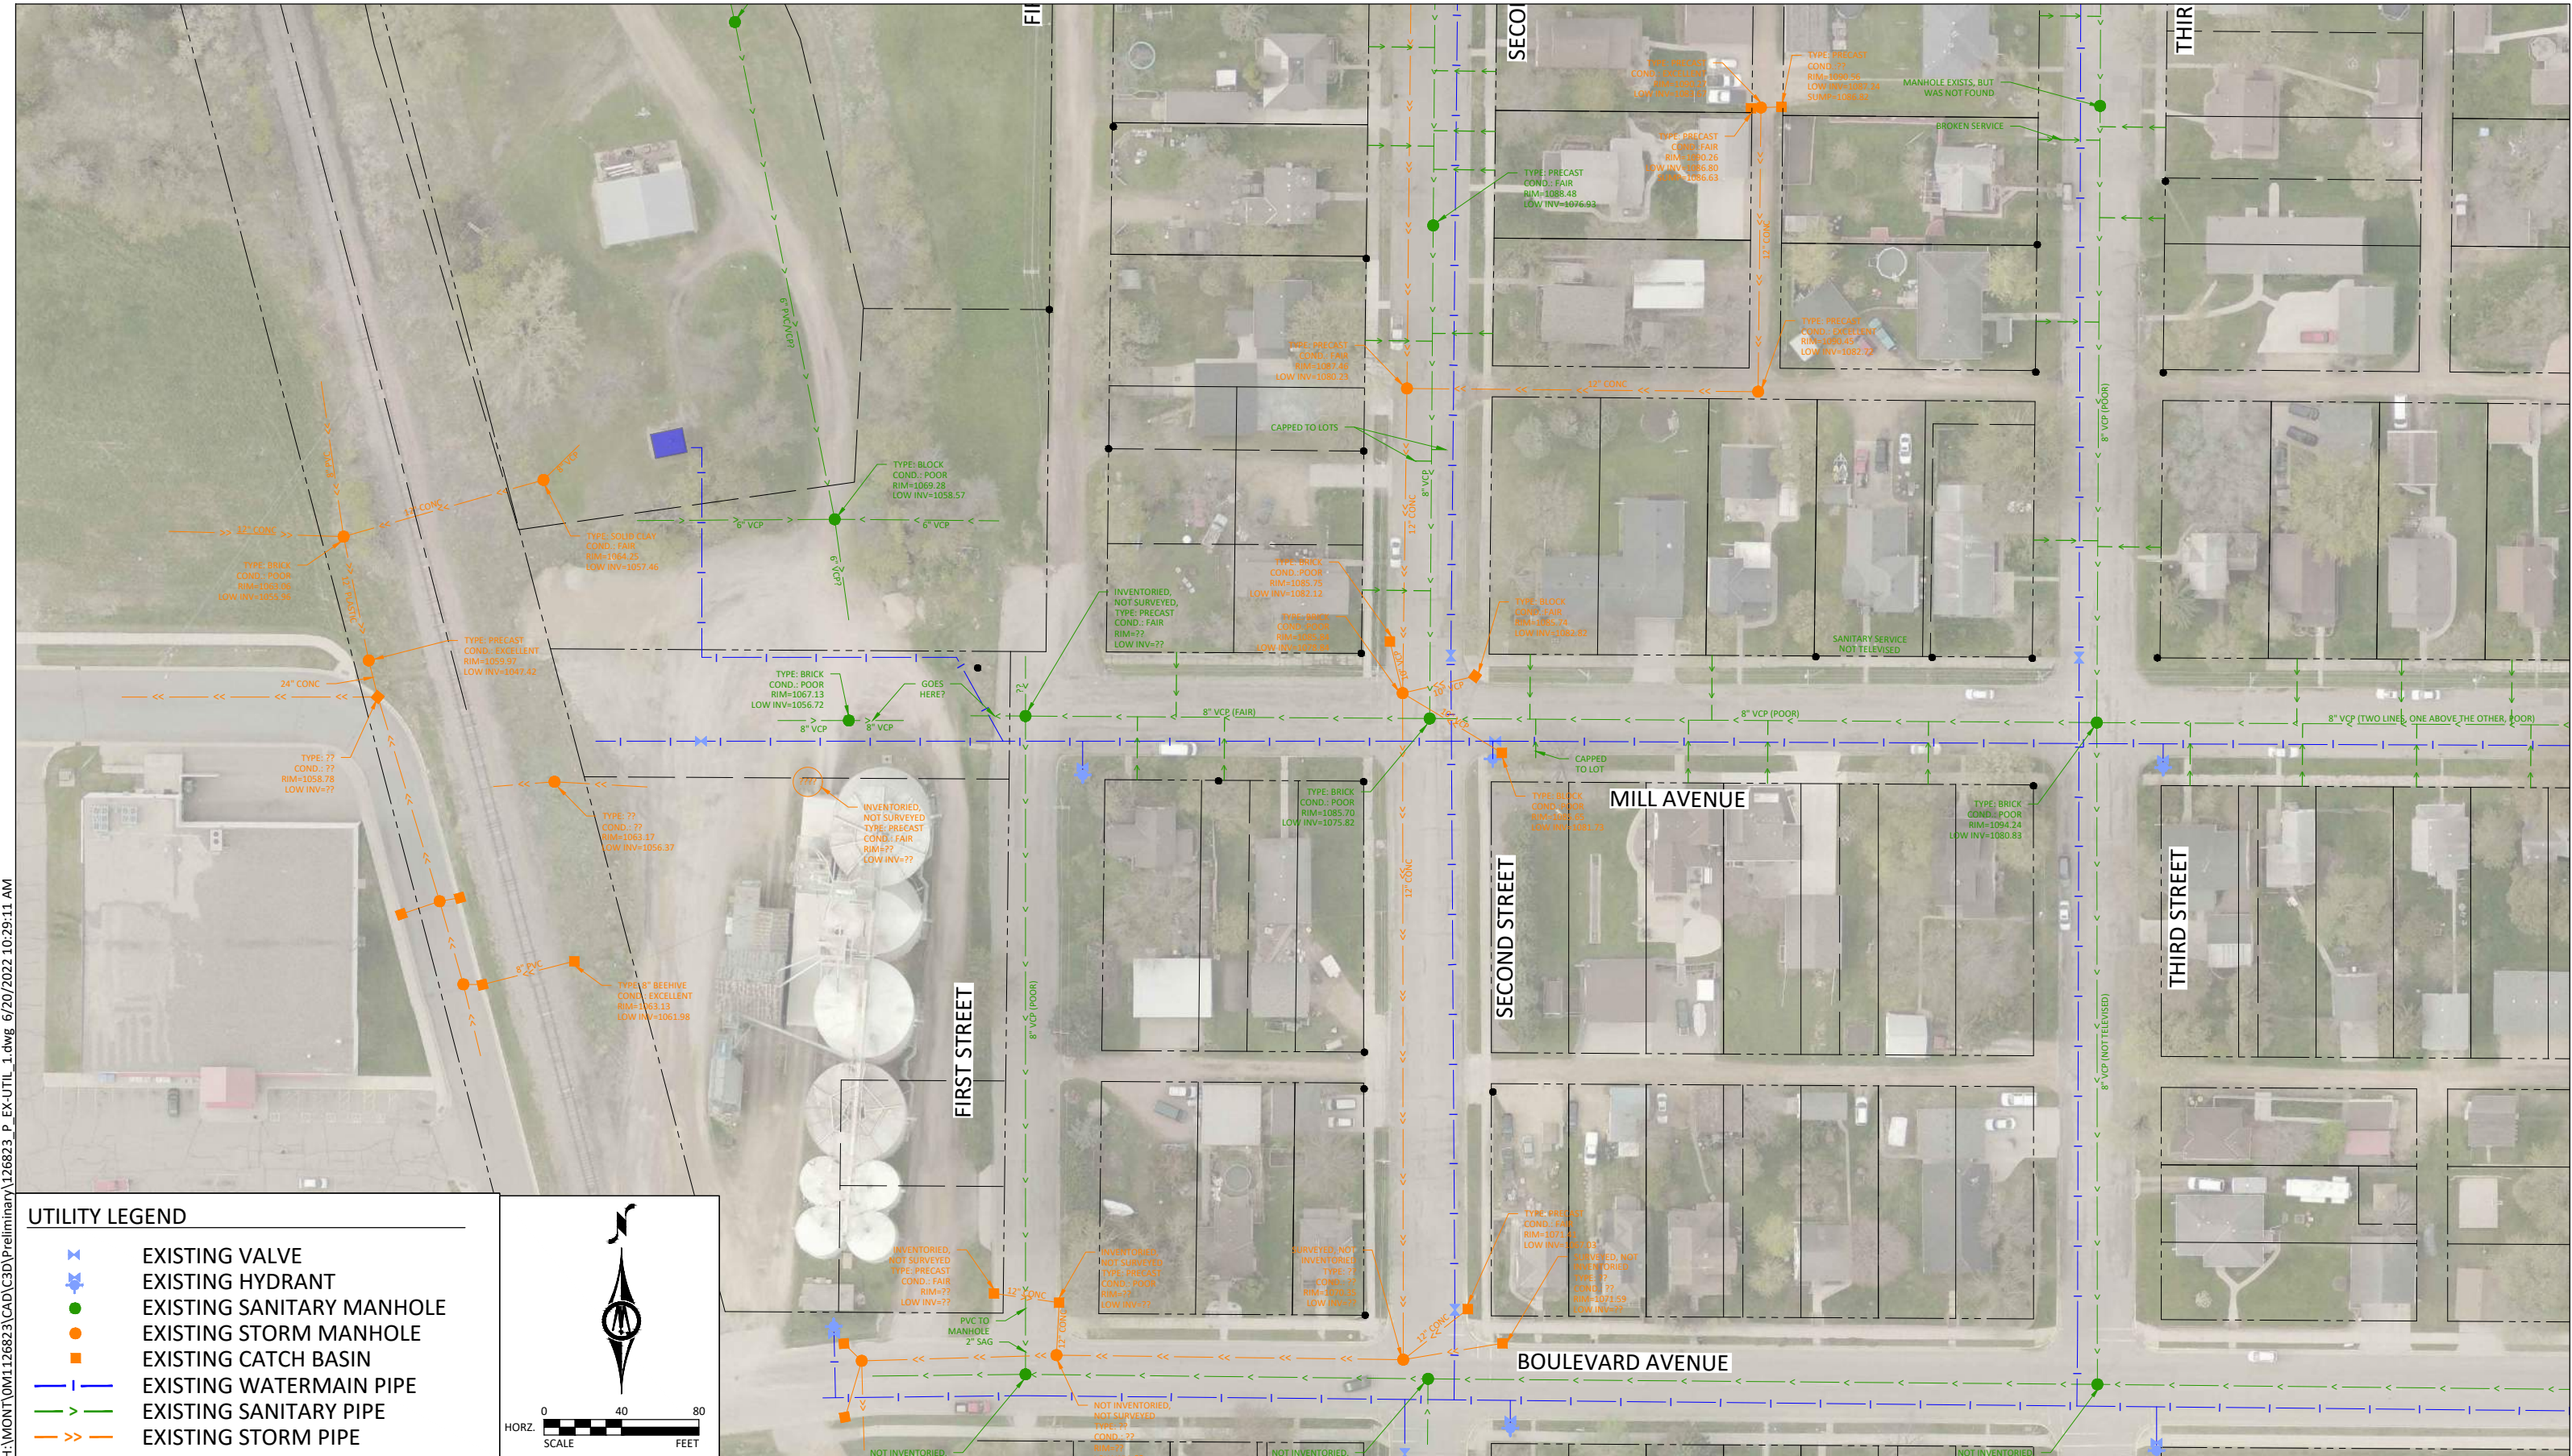

Based on the findings presented in this report, the proposed improvements are necessary, cost effective, and feasible and can be best accomplished by letting competitive bids for the work. The proposed project will provide necessary watermain, sanitary, and storm sewer improvements along with street repairs to maintain the City's infrastructure.

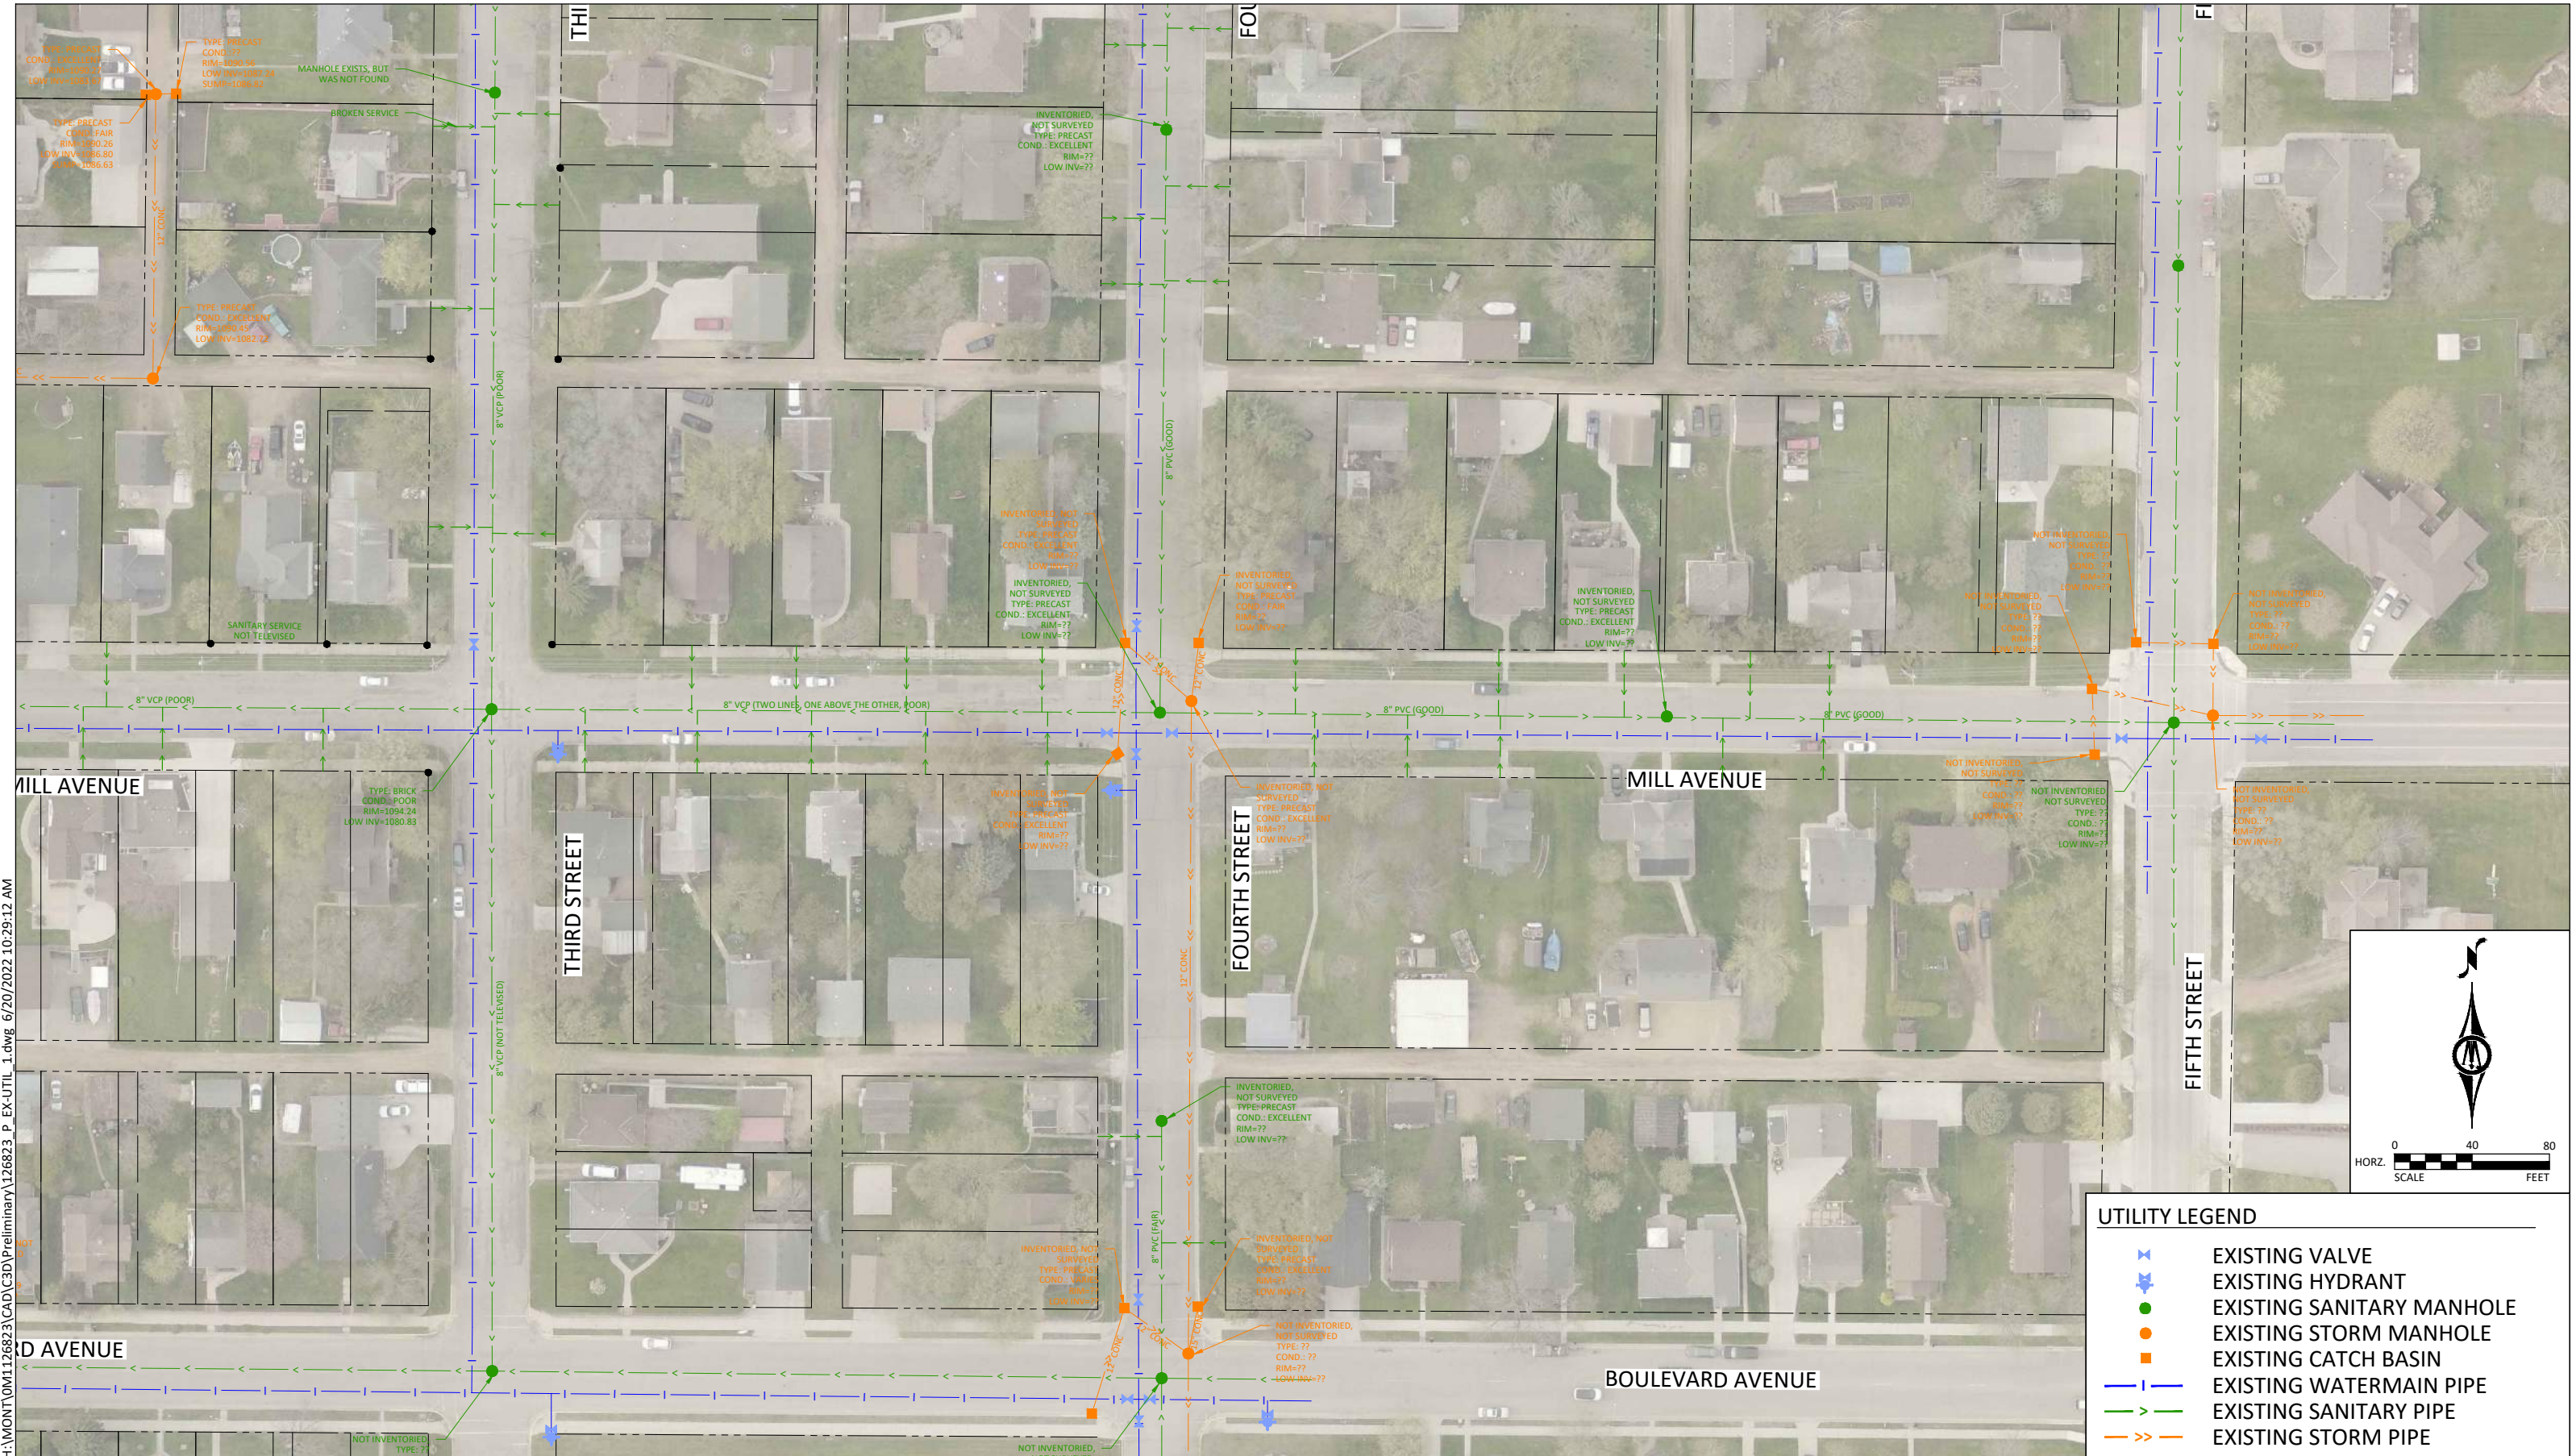

Bolton & Menk, Inc. recommends that if these improvements are deemed financially feasible, that the City Council pass a resolution to review this report and call for a public hearing on the improvements. It is also recommended that the Council authorize the preparation of plans and specifications for the proposed improvements.

Assessments will be certified following construction and the formal assessment hearing process.
